INSTALLATION PROCEDURE

1. Previous firmware must be at least 1.4.4 version
2. Put all the .bin files into your USB flash memory root path. Please notice that it should be smaller than 16GB and previously formatted in FAT32. There is no need to rename the file.
3. Plug the USB disk into the embedded USB port and press the screen power on button during a few seconds. USB must never be removed during whole firmware upgrade process.
4. After updating the firmware, please go to Setting > About > and press Factory reset.

1.
